

# JONATHAN BLUHM

Westminster, Colorado

📞 719-243-9318 ✉ [bluhmjc@gmail.com](mailto:bluhmjc@gmail.com) 🌐 [github.com/johnnybluhm](https://github.com/johnnybluhm)

## Summary

---

Deep thinking, adaptable computer scientist with a passion for programming. Cursed with a never ending thirst for knowledge. Addicted to figuring out how things work. Consumed with the desire to be continuously challenged.

## Technical Skills

---

**Languages:** C#, Java, Python, Typescript, Javascript, C, SQL, Bash, HTML, CSS

**Technologies:** Linux, Windows, Asp.net Core, Node.js, Msbuild, Maven, Gitlab CI, Azure Devops, Splunk, Powershell

**Other:** Data Structures and Algorithms, Agile, Unit Testing, Code Reviews, REST, Microservices, Distributed Systems

## Experience

---

### Geico 2023 – Present

*Engineer II* Westminster, Colorado

- Worked with a team of nine engineers to improve the stability of the integrated payment application. The integrated payment application is a multithreaded, microservice architecture, cloud based application that processes payments for thousands of clients across the United States.
- Cleaned up unnecessary logs made by our logging service, reducing the amount of data logged to splunk every day from 200GB to 10GB.
- Identified and corrected a memory leak in a long running process. The fix allowed us to change the machine it was running on from an i2 to an i1 instance, saving around \$300/month.

### Sphere Commerce 2022 – 2023

*Software Engineer* Westminster, Colorado

- Worked with a team of nine engineers to improve the stability of the integrated payment application. The integrated payment application is a multithreaded, microservice architecture, cloud based application that processes payments for thousands of clients across the United States.
- Cleaned up unnecessary logs made by our logging service, reducing the amount of data logged to splunk every day from 200GB to 10GB.
- Identified and corrected a memory leak in a long running process. The fix allowed us to change the machine it was running on from an i2 to an i1 instance, saving around \$300/month.
- Fixed unit tests that would periodically fail. Due to the multithreaded nature of the integrated payment application, certain unit tests would fail due to timing issues. Many of these were fixed, leading to far quicker builds and easier development.

### Dish Network 2021 – 2022

*Software Engineer I* Superior, Colorado

- Worked closely with eight other engineers to design, develop, deploy, and maintain software applications for the Dish Network uplink center. These applications provide monitoring solutions and IT support for uplink center workers.
- Upgraded six year old website to use modern web development tools. The older website had no modules and tests, so I integrated node.js into the project to allow for dependency management and testing. Developers can now easily modify and expand the website and be confident of their changes.
- Handled on-call issues from stakeholders, saving the company money by minimizing downtime of our applications.
- Mentored new team members, allowing them to contribute to projects with confidence.

### United States Navy 2013 – 2017

*Nuclear Electrician* Groton, Connecticut

- Functioned as an integral part within a watch team to maintain smooth operation of the reactor plant during complex evolutions.
- Solved problems efficiently by referencing manuals and textbooks.
- Retained the vital documentation for maintenance and history of the reactor control system.
- Communicated effectively with peers from a wide variety of disciplines and backgrounds.

## Education

---

### University of Colorado Boulder 2019 – 2021

*Bachelor of Science in Computer Science* Boulder, Colorado

- GPA: 3.76
- Course Work: Linux System Admin, Network Systems, Operating Systems, Robotics, Algorithms, Human Computer Interaction, Data Structures, Cybersecurity, Machine Learning, Calculus 1-3, Probability and Statistics, Linear Algebra
